

# Disinfecting vehicles

Clean surfaces first, and then wipe down with an EPA- registered disinfectant. Wearing chemical gloves (i.e., nitrile gloves) is recommended.

All commonly touched surfaces used to access and control the vehicle should be cleaned and disinfected, including:

- Car keys and fobs
- Door handles, door latches and lock buttons (*interior and exterior*)
- Steering wheel; Shift lever; Wiper and turn signal stalks
- Any buttons or touch screens (*radios, mirror adjusters, climate controls, etc*)
- Headrests and seat pockets
- Center console and cup holders
- Driver and passenger seat belts and armrests, grab handles, and seat adjusters
